

Full-stack Developer with **3+ years** of experience building and scaling **high-throughput systems**. Strong in **backend architecture, distributed systems**, performance optimisation, and cloud-based deployments. Proven track record of delivering production-grade solutions and resolving complex issues in large-scale environments.

TECHNICAL SKILLS

- **Languages:** Java, JavaScript, SQL
- **Backend:** Spring Boot, Spring Cloud, Maven, REST APIs
- **Frontend:** React.js, HTML, CSS
- **Databases & Messaging:** PostgreSQL, MySQL, Redis, RabbitMQ, Kafka
- **Cloud & DevOps:** AWS (EC2, S3), Docker, NGINX, CI/CD (Jenkins, GitHub Actions), Linux, Git
- **Observability:** Splunk, AppDynamics, Dynatrace
- **Architecture & Design:** Microservices, Distributed Systems, Event-Driven Architecture

WORK EXPERIENCE

Fedex, Hyderabad, India

Full Stack Developer (Oct, 2025 - Present)

Stack: Spring Boot, Kafka, Jenkins, Github Actions, Splunk, AppDynamics, Cloud

- **Shipment Foundational Systems** — core backend team owning microservices that process shipment modification workflows (hold requests, address changes, fraud alerts, last-mile routing) at a global scale across **100K+ daily transactions**, peaking at **millions** of requests during peak seasons.
- Developed and enhanced backend services for a **major international expansion initiative**, partnering with globally distributed engineering teams to implement business requirements, validate cross-system integrations, and ensure seamless adoption across dependent applications.
- Contributed to the **architectural redesign and modernization** of 3 legacy service modules, implementing service-level improvements that reduced technical debt, aligned systems with current microservices standards, and lowered recurring production issues by ~20%.
- Worked on **Kafka-based event-driven workflows**, implementing and maintaining producers and consumers, handling message serialization, retry mechanisms, consumer group configurations, and monitoring message processing across distributed services.
- Investigated and resolved **15+ production incidents** using **Splunk, AppDynamics, and Dynatrace**, performing root cause analysis across distributed service traces and implementing preventive fixes for recurring issues impacting business-critical workflows.
- Authored and maintained **CI/CD pipelines (Jenkins & GitHub Actions)** — pipeline scripting, build optimisation, and migration from Jenkins to GitHub Actions workflows directly supporting continuous delivery with zero tolerance for deployment failures.
- Collaborated with platform and DevOps teams to deploy, configure, and maintain microservices across development, staging, and production environments, supporting reliable and repeatable release processes.

C-DAC, Hyderabad, India

Project Associate → Project Engineer (May, 2023 - Oct, 2025)

Stack: Spring Boot, Spring Cloud Gateway, RabbitMQ, Redis, PostgreSQL, MySQL, Docker, NGINX · AWS, React.js

- End-to-end development for an accreditation platform & SaaS LMS, maintaining **99.5%+ uptime** across a distributed microservices architecture.
- Built a centralized **Spring Cloud Gateway** integrating Keycloak (**OAuth2/JWT**), RBAC, rate limiting, and custom reactive filters; implemented Redis-based token caching, reducing authentication latency by **~35%**.
- Built a **distributed document management** platform using Spring Boot, MinIO, Docker Swarm, and NGINX, providing version-controlled S3-compatible storage for ~12 TB of files and replacing a legacy file-server architecture.
- **Async & Caching:** RabbitMQ pipelines + Redis, increased throughput by **~45%** and cut avg API response time from **~400 ms → ~180 ms** under peak load.
- **Optimized PostgreSQL and MySQL** through composite indexing, query tuning, connection-pool optimization, and read-replica configurations, reducing P95 query latency by **~30%** under high-concurrency workloads.
- **Scaling & Deployment:** Scaled stateless microservices horizontally via Docker Swarm to handle **3-4x traffic** spikes during peak usage periods; maintained **zero-downtime rolling deployments** across on-prem and **AWS (EC2, S3)** via Docker Swarm + NGINX.
- Developed modular React.js applications and a shared component library adopted across LMS modules; reduced frontend bundle size by **~35%** through code-splitting, lazy loading, and Webpack optimization, improving application responsiveness under low-bandwidth conditions.

EDUCATION

National Institute of Science and Technology | 2018-2022
Bachelor of Technology in Computer Science – **9 CGPA**
